

Infra-Red Heating Assemblies

Roband Infra-Red Heat Lamp Assemblies are manufactured from an exclusive extruded anodized aluminium section, specifically designed to breathe. These units are designed for use at either front or back of house where more heat and no light is required. The heat is provided by a stainless steel element and an energy regulator is used to precisely control the output, emitting a very even heat over the length of the warming area. Features a simple mounting system and comes complete with a 10 amp plug and cord.
